## Get Cookies for Admin

This project has no registration function, so we need to set up a local environment, create a user manually. Let's create an admin user here

then locally login

and obtain their cookies after login successfully

## JWT Decryption and Forgery

JWT decryption, the payload only contains the admin user we just registered, without verifying the current user's password. At the same time, the symmetric key has also been decrypted. From then on, any identity login can be achieved using JWT

Note: payload has a time limit, if it expires, please log in again to capture the new cookie
